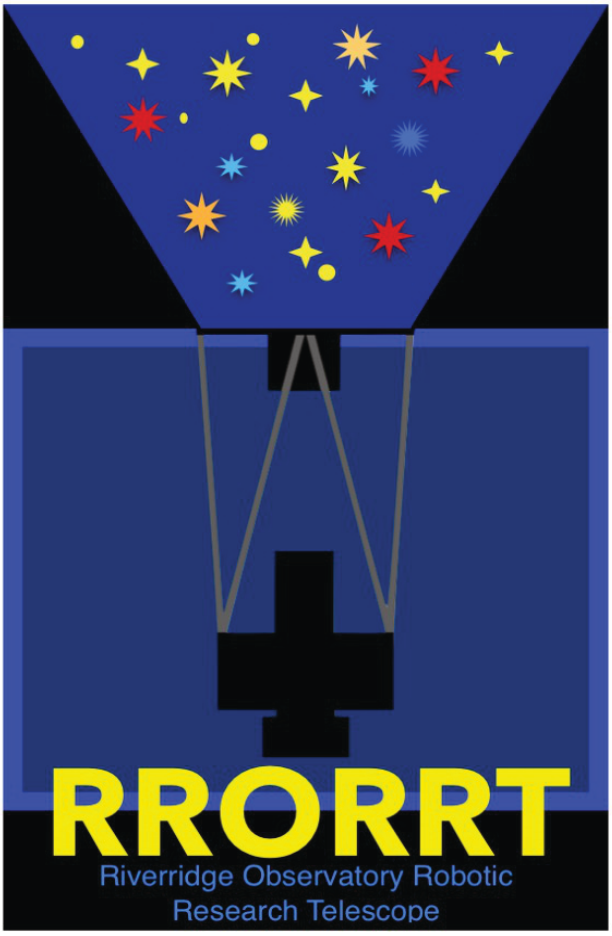
APPENDIX TO RRORRT OBSERVING PLAN TUTORIAL

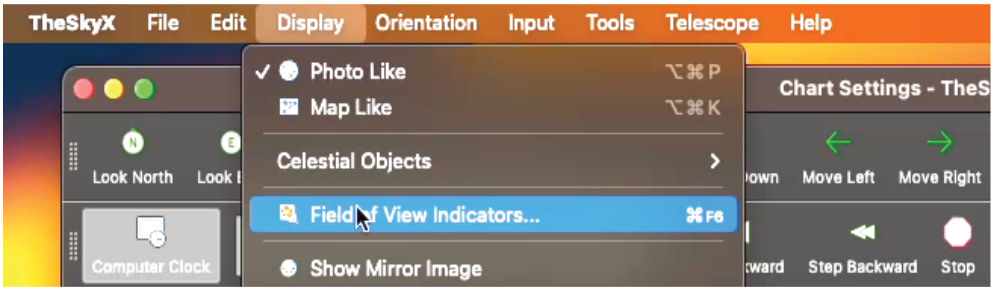
CREATING AN FIELD OF VIEW INDICATOR FOR THE SKY X



This tutorial assumes you are familiar with The Sky X. This tutorial uses The Sky X for Mac. The menus and FOVI setup should be the same for Mac and Windows.

For more information on The Sky X, see https://www.bisque.com/product/theskyx-pro/

Open The Sky X and click on Display. Choose Field of View Indicators…



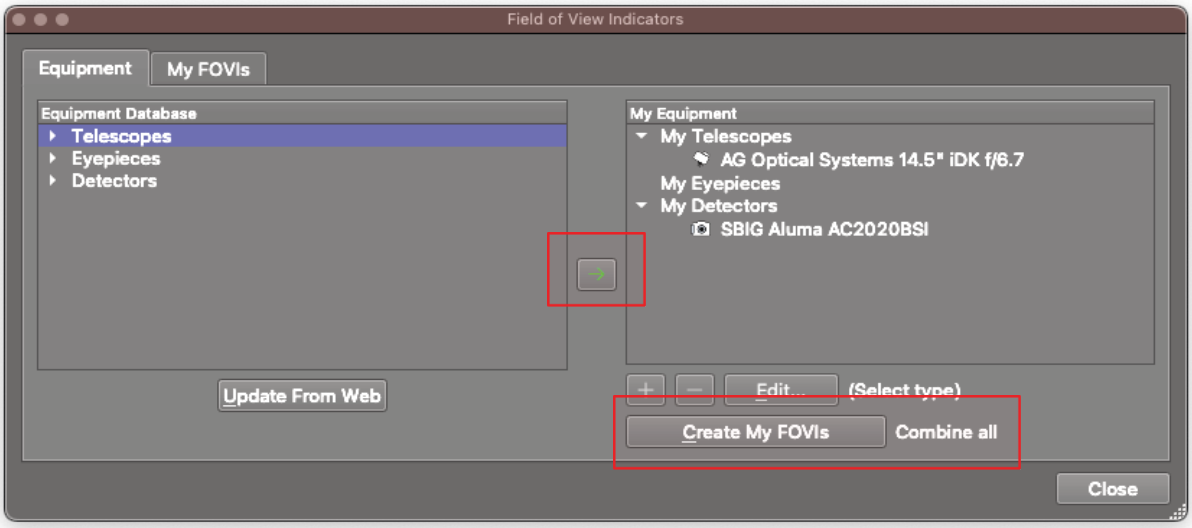
Choose the equipment the RRORRT uses.

First, click Update From Web to download the latest equipment lists.

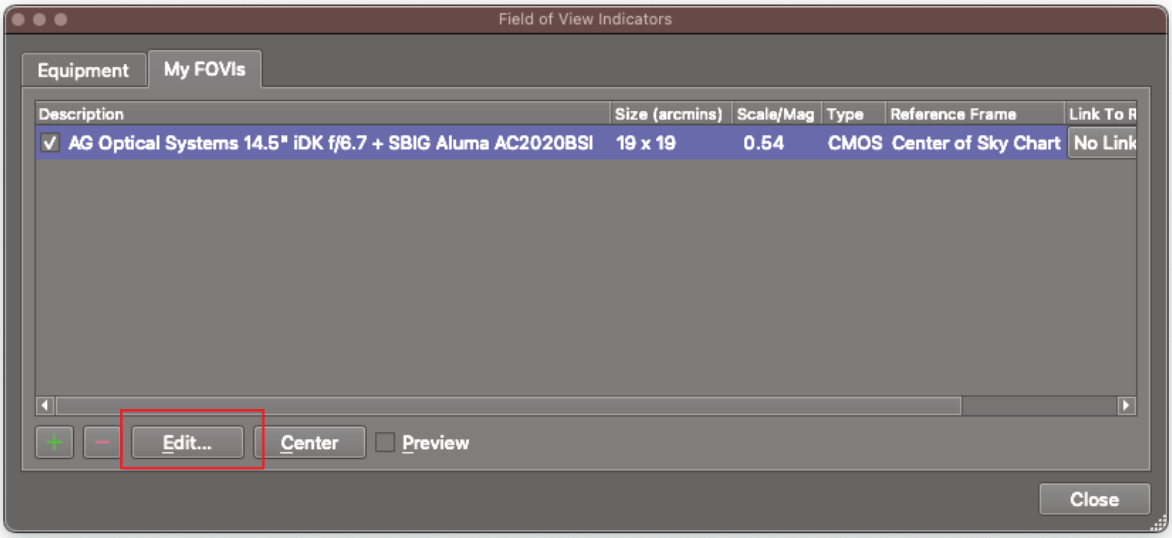
Click on Telescopes, choose AG Optical > AG Optical Systems 14.5' iDK f/6.7. Move the selection to My Equipment by clicking the green arrow or double-clicking.

Under Detectors, choose SBIG > SBIG Aluma AC2020BSI. Move the selection to My Equipment by clicking the green arrow or double-clicking.

Click Create My FOVIs.

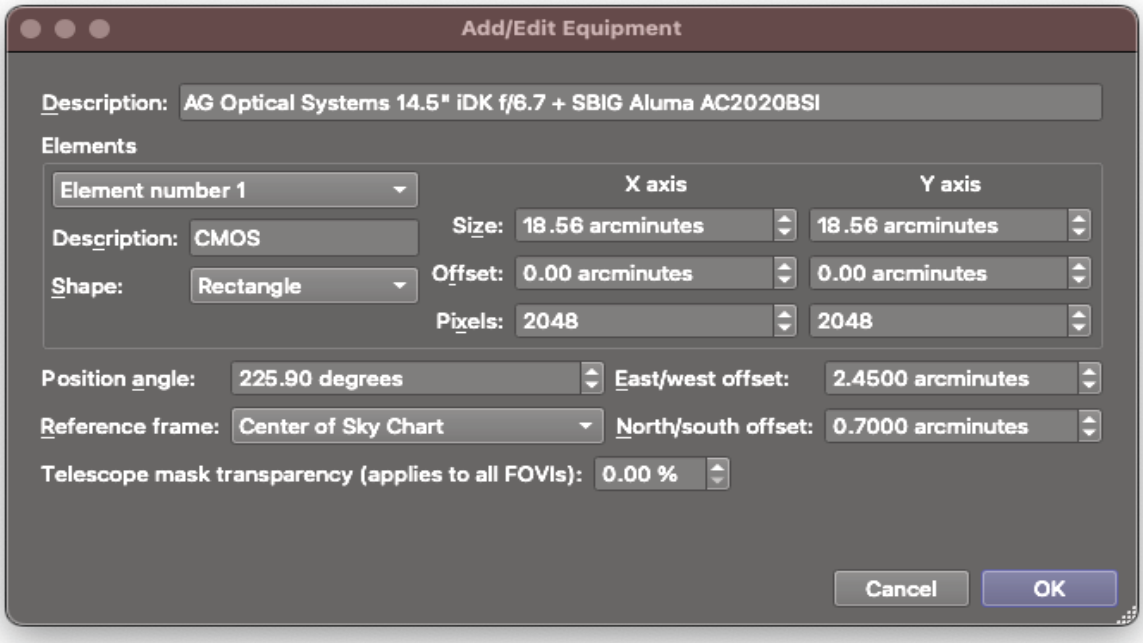


Click the Edit… button to enter the FOVI creator/editor.

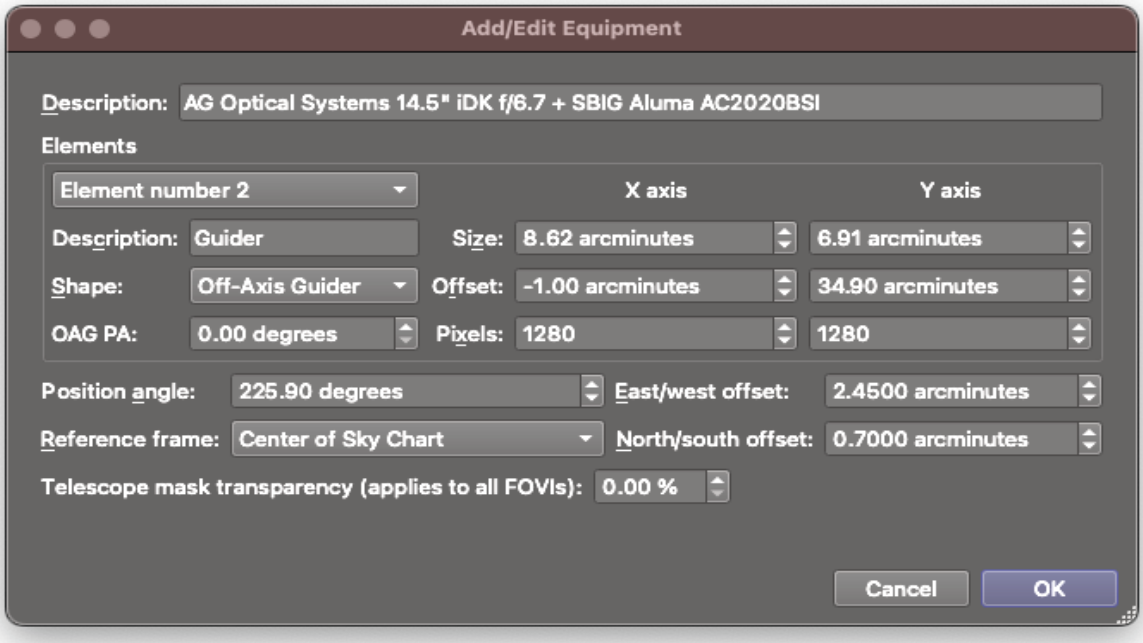


There are four elements in the RRORRT's FOVI. Enter the information in the following screenshots.

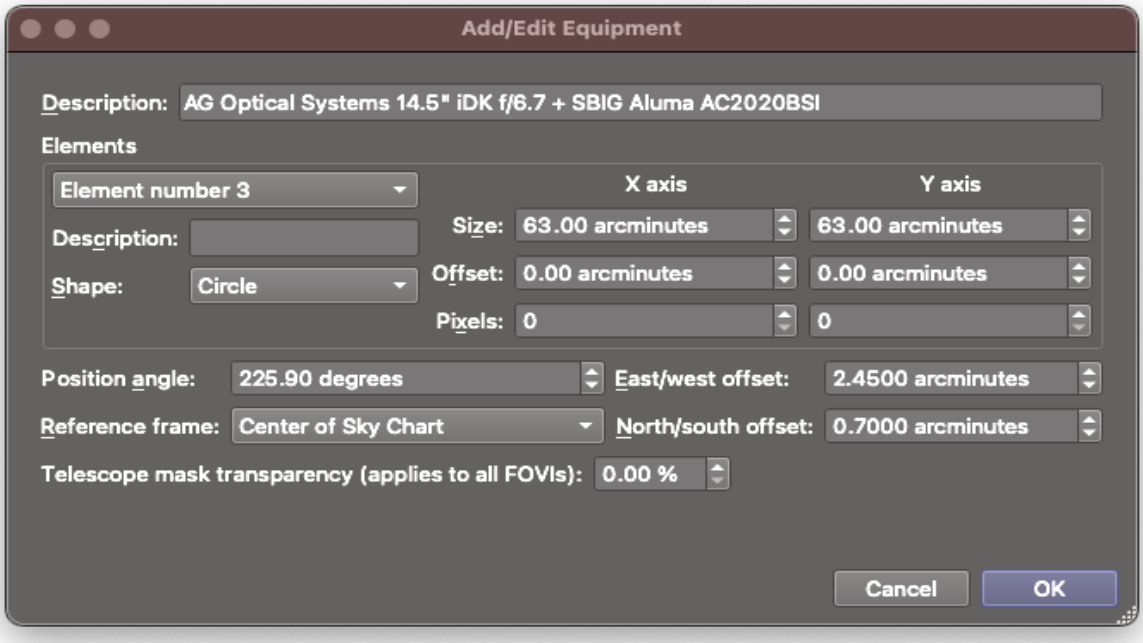
ELEMENT NUMBER 1



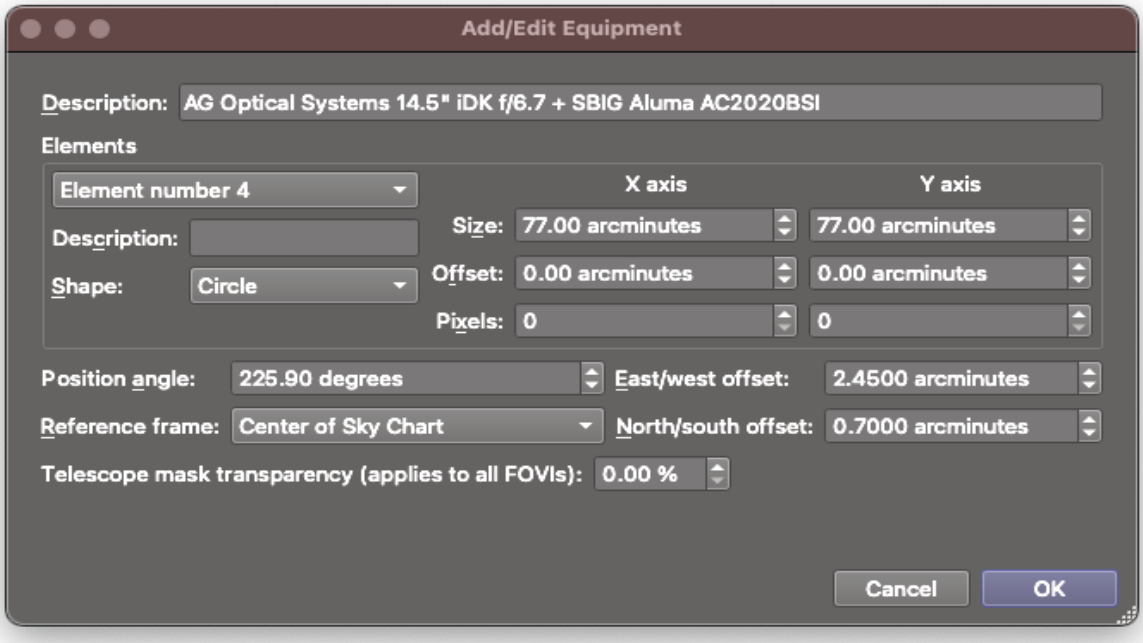
ELEMENT NUMBER 2

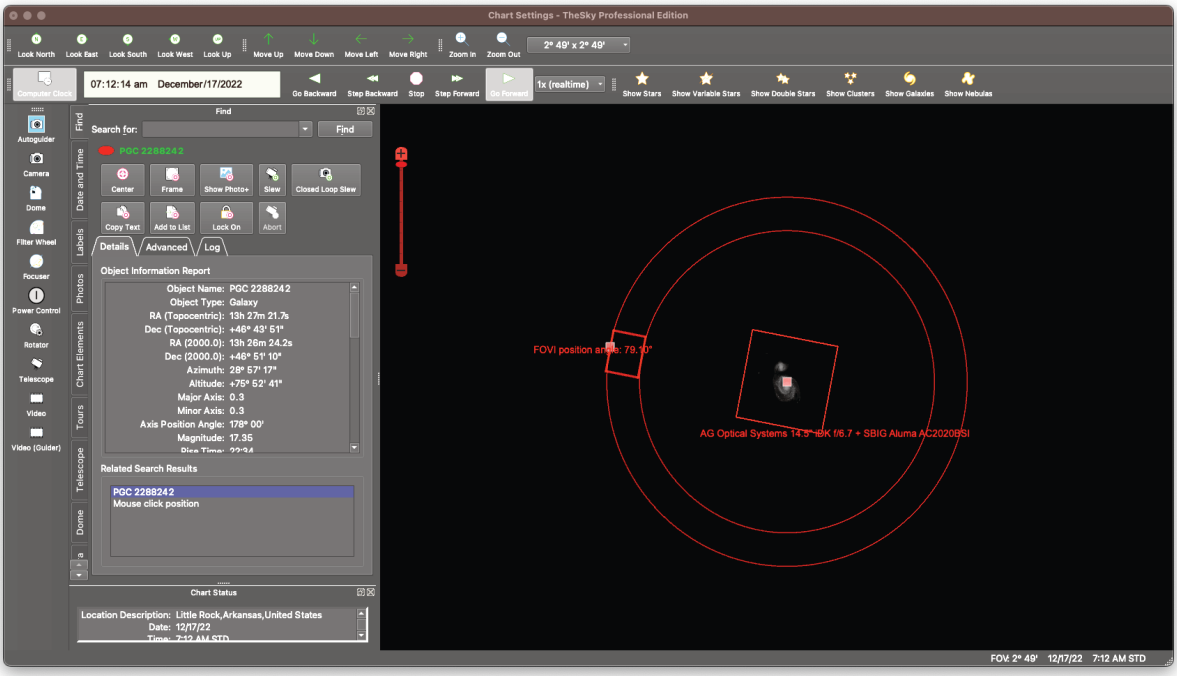


ELEMENT NUMBER 3



ELEMENT NUMBER 4





Click OK when finished with the 4th Element. The FOVI will appear on your screen. To move the guider box, click on the outer edge of the box and drag into position. When you identify an appropriate guide star, note the FOVI position angle. When creating your observing plan, type that angle into Pos. Angle (deg).
